Risk Based Approach towards Transparency on Non-Equity Investment Products

Marcello Minenna - Head of Quantitative Analysis Unit, Consob

Preliminaries

The transparency on the risk profile of non-equity investment products is based on three synthetic indicators (three pillars) – defined through the development of specific quantitative methods – in order to allow investors to take informed investment decisions.

Synthetic indicators robust, objective and backward verifiable

Syllabus

Preliminaries □ regulatory framework □ products' risk-return profile VS investors' risk-return profile

Three-pillars approach

□ financial structures

Preliminaries

Consob Annual Report 2008 Speech by the Chairman to the Financial Market

"The inclusion of indicators on performance scenarios, the degree of risk, costs and recommended investment time horizons in information documents will allow investors to assess and compare investments based on standard criteria.

This is a new approach on the international scene that meets the needs of a market, such as in Italy, where a high capacity for investment tends to privilege direct forms of investment".

Preliminaries

Consob Annual Report 2009 Speech by the Chairman to the Financial Market

"The weight of structured bonds on the total wealth of Italian families has been progressively increasing in the last decade This is a phenomenon that Consob is carefully monitoring, having considered the presence in retail investors portfolios of risky and illiquid bonds that do not offer an adequate return with respect to Government bonds yields."

CONSOB

Preliminaries

European Commission The EU Single Market Communication from the Commission on Packaged Retail Investment Products

Update on Commission work on Packaged Retail Investment Products 16 december 2009

Pre-contractual disclosures

Common elements to <u>allow</u> for <u>comparisons</u> to include the structure of documents, order of sections, use of plain language, and focus on <u>key information about nature</u> of <u>product</u>, its risks, potential performance and costs.

QdF Consob n. 63: A Quantitative Risk-Based Approach to the Transparency on Non-Equity Investment Products

The regulatory choices Consob has made over time reflect its view of the prospectus as the privileged channels to realize an <u>effective</u> <u>transparency</u> both in the offering and in the distribution of non-equity investment products.

- 7

Such approach, developed and progressively implemented by Consob, is based on <u>three</u> <u>pillars</u>, corresponding to <u>three</u> <u>synthetic</u> <u>indicators</u> defined through the application of specific quantitative methods.

The three pillars <u>fully</u> <u>define</u> the <u>contents</u> of a <u>product</u> <u>information</u> <u>sheet</u> which should become the core of the prospectus and of the other transparency documentation intended to effectively.

Preliminaries

European Commission The EU Single Market Communication from the Commission on Packaged Retail Investment Products

The level of protection afforded to the retail investor <u>should not vary</u> according to the legal form of these products [...]

This work:

- will provide a market (for packaged retail investment products) in which regulatory arbitrage does not drive savings towards particular products;
- has the objective to introduce a <u>horizontal approach</u> that will provide a coherent basis for the regulation of mandatory disclosures and selling practices at European level, <u>irrespective</u> of how the product is packaged or sold.

CONSOB

QdF Consob n. 63: A Quantitative Risk-Based Approach to the Transparency on Non-Equity Investment Products

<u>Transparency</u> regulation on the <u>risk profile</u> of non-equity investment products should be <u>standard</u> and translate into suitable regulatory provisions a coherent approach to risk measurement and to its correct representation to the potential investors.

This will create a context compatible with the concrete realization of a <u>levelled</u> <u>playing</u> <u>field</u> and with the <u>prevention</u> of any <u>regulatory arbitrage</u> which could arise due to the fragmentation of the current regulation.

[...] the only solution is represented by a thorough revision of both the European and the Italian regulatory framework in the direction of a <u>single</u> <u>directive</u> on the transparency for non-equity investment products.

Preliminaries

Proposal of the European Commission for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Directive 2003/71/EC on the PROSPECTUS (September 2009)

Whereas (10):

"The <u>summary</u> of the prospectus is a key <u>source</u> of <u>information</u> for retail investors. It should be short, simple and easy for targeted investors to understand. It should focus on the key <u>information</u> that investors need in order to be able to make informed investment decisions. Its content should not be restricted to any predetermined number of words. The format and content of the summary should be determined in a way that ensures <u>comparability</u> with other investment products that are similar to the investment proposal described in the prospectus.".

Preliminaries

FINANCIAL REGULATORY REFORM: A NEW FOUNDATION

Protect consumers and investors from financial abuse.

To <u>rebuild trust</u> in our <u>markets</u>, we need <u>strong</u> and <u>consistent</u> <u>regulation</u> and supervision of consumer financial services and investment markets. ...

We must promote <u>transparency</u>, simplicity, fairness, accountability, and access. We propose:

- •••
- Stronger regulations to improve the transparency, fairness, and appropriateness of consumer and investor products and services
- A <u>level playing field</u> and higher standards for providers of consumer financial products and services, whether or not they are part of a bank.

Preliminaries

FINANCIAL REGULATORY REFORM: A NEW FOUNDATION

Transparency.

We propose a new proactive approach to disclosure.

[...] all <u>disclosures</u> and other communications with consumers be reasonable: balanced in their presentation of benefits, and <u>clear</u> and conspicuous in their identification of <u>costs</u>, penalties, and <u>risks</u>.

Mandatory disclosure forms should be clear, simple, and concise.

Moreover, reasonableness does not mean a litany of every conceivable risk, which effectively obscures significant risks. It means identifying conspicuously the more significant risks. It means providing consumers with disclosures that help them to understand the consequences of their financial decisions.

Preliminaries: regulatory framework

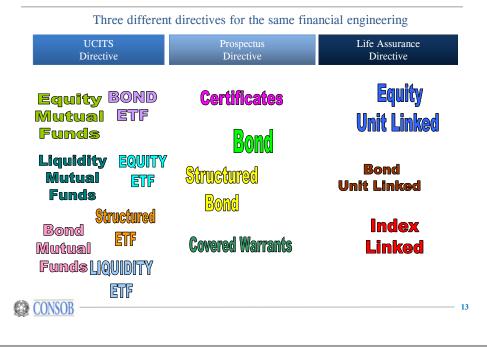

The implementation of the <u>disclosure regulation</u> on the <u>risk-profile</u> of non-equity investment products <u>should allow</u> the <u>investor</u>, even assisted by a financial advisor, to <u>choose</u> the financial <u>product more suitable</u> to his investment objectives.

CONSOB

Three-pillars approach: financial structures

"Risk target" products

"Risk target" products invest in any market and any financial instrument in order to optimize over time a given target in terms of risk exposure.

"Benchmark" products "Benchmark" products have an investment policy which is anchored to a benchmark, and in relation to this benchmark the asset management style may be either passive or active.

"Return target" products "Return target" products feature a financial engineering (and, in some cases, a consequent investment policy) aimed at pursuing a minimum target return on the financial investment.

Three-pillars approach: financial structures

The three-pillars approach is based on the preliminary classification of the products into three types of financial structures:

"Benchmark" products

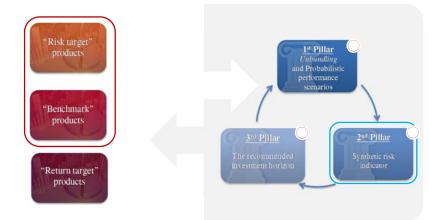

CONSOB

21

23

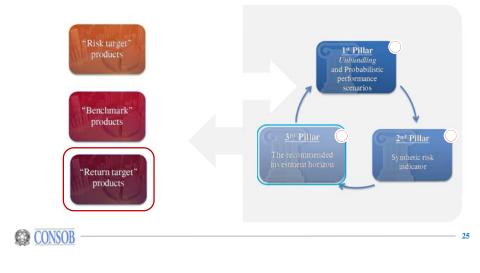

Three-pillars approach: financial structures

In "risk target" or "benchmark" products the <u>degree</u> of <u>risk</u>, together with the costs applied, <u>allows</u> to <u>determine</u> the recommended <u>minimum</u> <u>investment</u> <u>time</u> <u>horizon</u>. This horizon is used as the reference period to calculate the probability scenarios.

Three-pillars approach: financial structures

In "return target" products the <u>target return</u> at a given maturity clearly <u>identifies</u> the investment <u>time horizon</u> (a shorter holding period would compromise the liquidability of the product) <u>w.r.t.</u> which the probability <u>scenarios</u> and the <u>degree</u> of risk are determined.

1st Pillar: unbundling and performance scenarios

Unbundling and **Probabilistic Performance Scenario**

Performance risk w.r.t. the risk-free asset under the risk-neutral probability measure

... illustrates the unbundling of the price of the non-equity investment product at the time of subscription and provides a clear and concise information about its possible outcomes and costs.

Syllabus

CONSOB

2nd Pillar: risk target and benchmark products

The degree of risk of "risk target" and "benchmark" products is <u>initially</u> <u>identified</u> by the intermediary <u>choosing</u> the <u>risk</u> <u>class</u> which he deems to better <u>match</u> the specific features of the product's <u>financial</u> <u>engineering</u> over the recommended investment time horizon.

Return target"

products

During this horizon, the intermediary monitor any possible <u>migration</u> of the <u>degree of risk</u> to a different risk class or, for "benchmark" products, to a <u>different management class</u> (i.e. the intensity of the asset management activity in terms of deviation from the chosen benchmark).

2nd Pillar: the degree of risk

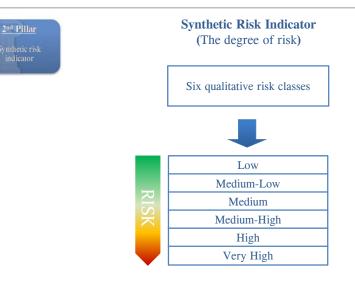

Synthetic Risk Indicator

... provides a description, on a qualitative scale, of the risk level of the financial products based on volatility measures.

... represents in an explicit way the riskiness of the product embedded in the probabilistic performance scenarios of the first pillar.

Migration of the Synthetic Risk Indicator

Migrations of the risk profile are persistent changes either of the degree of risk or of the degree of deviation from the benchmark which can significantly affect investors assessment of the non-equity product.

Syllabus

- Preliminaries
- □ regulatory framework
