Preface	xvii
About the author	xix
PART I: CALCULUS	
1 Set theory	3
1.1 Basics	3
1.2 Cardinality of a set	3
1.3 Set operations	4
1.4 Topology	7
1.4.1 Equivalence relationship between sets	8
1.4.2 Real numerical space	10
1.4.2.1 Boundaries of a subset of \mathbb{R}	13
1.4.2.2 Intervals of \mathbb{R}^n	14
1.4.2.3 Accumulation points	17
1.5 Metric spaces	18
1.5.1 Euclidean space	20
1.5.2 Metric spaces and accumulation points	20
1.6 Algebras	22
1.7 σ -algebra	23
1.7.1 The Borel σ -algebra	26
2 Linear algebra	31
2.1 Basic definitions	31
2.2 Square matrix	32
2.2.1 Determinants	34
2.2.1.1 Properties of the determinants	35
2.2.2 Inverse matrix	36
2.2.2.1 Properties of the inverse matrix	37
2.2.3 Quadratic forms	37
2.2.3.1 Classes of quadratic forms	37
2.2.3.2 Cholesky factorisation	38
2.3 Vector spaces	39
2.3.1 Vector space norms	42
2.3.1.1 Vector space norm and metric space	42
2.3.1.1.1 Banach space	44
2.3.2 Inner product space	45
2.3.2.1 Inner product space, vector space norms and metric spaces	45
2.3.2.1.1 Hilbert space	48

3	Sequences and series	51
3.1	Sequences	51
3.1.1	Convergence/divergence	51
3.1.2	The Napier number	52
3.2	Series	53
3.3	Sequence of functions	53
3.3.1	Convergence/divergence	53
4	Differential calculus	57
4.1	Definition of derivatives	57
4.2	Differentiation rules	57
4.3	Main theorems	59
4.4	Series expansions	59
4.4.1	Remarkable series	59
5	Integral calculus	61
5.1	Basics	61
5.2	Riemann integral	62
5.2.1	Classes of integrable functions	66
5.2.2	Definite integral	66
5.2.2.1	Definite integrals and variations	67
5.2.2.2	Propriety of the definite integral	67
5.2.3	Indefinite integrals	68
5.2.4	Improper integrals	69
5.2.5	Criteria of integration	70
5.2.6	Remarkable integrals	73
5.2.6.1	Dirichlet integral	73
5.2.7	Convolution	75
5.2.8	Methods for numerical integral	76
5.2.8.1	The Newton–Cotes algorithm	76
5.3	Riemann–Stieltjes integral	78
5.3.1	Classes of integrable functions	81
5.3.2	Properties of the Riemann–Stieltjes integral	81
5.3.3	Riemann integral and Riemann–Stieltjes integral	82
6	Remarkable functions	83
6.1	Sign function	83
6.2	Absolute value function	83
6.3	Index function	83
6.4	Delta function	84
6.5	Heaviside function	86
6.5.1	Heaviside function and Dirac delta	87
6.6	Gamma function	87
6.7	Erf function	88

7	Complex numbers	89
7.1	Basics	89
7.2	Operations	89
7.2.1	Representation of a complex number	91
7.3	Complex function	95
8	Differential equations	97
8.1	Ordinary differential equation	97
8.1.1	First-order ODE	97
8.1.1.1	Linear equations	97
8.1.1.2	Riccati's equation	97
8.1.2	Second-order ODE	98
9	Transforms	101
9.1	Laplace transform	101
9.1.1	Definition and examples	101
9.1.2	Laplace transform and Dirac delta	103
9.1.3	Properties and examples	104
9.1.3.1	Linearity	104
9.1.3.2	One-to-one relation	104
9.1.3.3	Time scaling	104
9.1.3.4	Exponential scaling	104
9.1.3.5	Time delay	105
9.1.3.6	Multiplication by t	105
9.1.4	Laplace transform and differential calculus	105
9.1.5	Laplace transform and ODEs	106
9.1.6	Laplace transforms and integral calculus	106
9.1.6.1	Laplace transforms and convolution	107
9.2	Fourier transform	107
9.2.1	Definitions and examples	107
9.2.2	Fourier transforms and Laplace transforms	111
9.2.3	Fourier transforms and Dirac delta	112
9.2.4	Properties and examples	114
9.2.4.1	Linearity	114
9.2.4.2	One-to-one relation	114
9.2.4.3	Time scaling	114
9.2.4.4	Time delay	114
9.2.4.5	Multiplying by t	114
9.2.4.5.1	Multiplying by t^k	115
9.2.4.6	Product of functions	115
9.2.5	Fourier transform and differential calculus	115
9.2.6	Fourier transform and partial differential equations	115
9.2.7	Fourier transforms and integral calculus	117
9.2.7.1	Transforms and convolution	117

PART II: PROBABILITY

10 Measure theory	121
10.1 Basics	121
10.1.1 Outer measure	121
10.1.2 Measure	122
10.1.3 Absolutely continuous measures and equivalent measures	124
10.1.4 Property of measures	125
10.2 Remarkable measures	126
10.2.1 Probability measures	127
10.3 Extension of a measure	127
10.4 Complete measure spaces	128
10.5 Lebesgue measure in \mathbb{R}	130
10.5.1 Construction of Lebesgue measure in \mathbb{R}	130
10.5.2 Properties of Lebesgue measure in \mathbb{R}	132
10.5.3 Subsets of \mathbb{R} and Lebesgue measure	133
10.5.3.1 Uncountable sets with a Lebesgue measure zero: the Cantor ternary set	134
10.5.3.2 Uncountable sets according to Lebesgue	135
10.5.4 Lebesgue measure in \mathbb{R}^n	136
10.5.4.1 Construction of the Lebesgue measure in \mathbb{R}^n	136
10.5.4.2 Properties of Lebesgue measure in \mathbb{R}^n	137
10.6 Lebesgue–Stieltjes measure in \mathbb{R}	139
10.6.1 Construction of the Lebesgue–Stieltjes measure in \mathbb{R}	139
10.6.2 Properties of Lebesgue–Stieltjes measures	143
10.7 Measurable functions	143
10.7.1 Basics	143
10.7.2 Properties of measurable functions	147
10.7.3 Simple functions	147
10.8 The Lebesgue integral (ie, abstract integral)	149
10.8.1 The Lebesgue integral for simple non-negative functions	149
10.8.1.1 Properties of the Lebesgue integral for simple non-negative functions	150
10.8.2 Lebesgue integral for non-negative functions	151
10.8.2.1 Properties of the Lebesgue integral for non-negative functions	155
10.8.2.2 Theorems of monotonous convergence	155
10.8.3 Lebesgue integral for any sign function (ie, belonging to space $\mathcal{L}^1(\mu)$)	156
10.8.3.1 Properties of the Lebesgue integral for any sign functions	159
10.8.3.2 Properties of the space $\mathcal{L}^1(\mu)$	160
10.8.3.3 Theorem of the monotonic convergence in the space $\mathcal{L}^1(\mu)$	160
10.8.3.4 Space $L^1(\mu)$	161
10.8.3.4.1 Property of the space $L^1(\mu)$	162
10.8.4 Theorem of dominated convergence	163
10.8.5 Riemann integral and Lebesgue integral	164

10.9	Radon–Nikodym derivative	167
10.10	Integration in product spaces	168
10.10.1	Basics	168
10.10.2	Product measure	169
10.10.3	Integral on product spaces	171
10.10.3.1	Fubini–Tonelli theorem	172
10.10.3.1.1	Riemann integral and Lebesgue integral	175
11	Probability theory	177
11.1	Basics	177
11.2	Probability measures and functions	177
11.2.1	Types of probability measures	179
11.2.1.1	Relations between types of probability measures	181
11.3	Conditional probabilities and independence	182
11.3.1	Independent events	184
11.4	Random variables	186
11.4.1	Random vectors	188
11.4.2	Probability functions of a random variable	189
11.4.3	Probability distribution for a random variable function	195
11.5	Radon–Nikodym derivative	199
11.6	Moments	200
11.6.1	Expected value and variance of random variables	200
11.6.1.1	Expected value and variance of random vectors	202
11.6.1.2	Expected value and variance properties	203
11.6.1.2.1	Expected value and random variable variance properties	203
11.6.1.2.2	Expected value and random vector variance properties	204
11.6.2	Conditioned expected value	205
11.6.2.1	Expected value conditioned to a random vector	205
11.6.2.1.1	Properties of the expected value conditioned to a random vector	205
11.6.2.2	Expected value conditioned to a σ -algebra	206
11.6.2.2.1	Properties of the expected value conditioned to a σ -algebra	207
11.7	Probability generating function	208
11.8	Moment generating function	209
11.9	Characteristic function	210
11.9.1	Characteristic function and probability function	212
11.10	Cumulant generating function	213
11.10.1	Relations between κ_r and μ_r via the moment generating function	214
11.10.2	Relations between κ_r and μ_r via the characteristic function	215
11.10.2.1	Relations between κ_r and $\bar{\mu}_r$	215

12 Stochastic calculus	217
12.1 Stochastic process	217
12.1.1 Introduction	217
12.1.2 Random time	219
12.1.3 Martingale	221
12.1.4 Brownian motion	223
12.1.4.1 Variation of Brownian motion	224
12.1.4.2 Correlated Brownian motions	225
12.1.5 Wiener process	227
12.1.5.1 Itô's algebra	228
12.1.6 Poisson process	228
12.2 Itô integral	229
12.2.1 Basics	229
12.2.2 Construction of the Itô integral	229
12.2.2.1 Itô integral for a simple process	230
12.2.2.1.1 Properties of the Itô integral for a simple process	230
12.2.2.2 Itô integral for a generic integrand process	231
12.2.2.2.1 Itô integral properties	232
12.3 Itô processes	233
12.4 Itô's lemma	236
12.4.1 Uni-dimensional case	236
12.4.2 Two-dimensional case	237
12.4.3 General case	238
12.4.4 Leibniz rule	239
12.5 Girsanov theorem	242
12.6 Feynman–Kac formula	244
12.6.1 The formula in \mathbb{R}^1	244
12.6.2 The formula in \mathbb{R}^2	245
12.6.2.1 Independent Brownian motions	245
12.6.2.2 Correlated Brownian motions	245
12.6.3 The formula in \mathbb{R}^n	246
13 Stochastic differential equations	247
13.1 Geometric Brownian motions	247
13.1.1 Constant coefficient geometric Brownian motion	247
13.1.1.1 Logarithm transformation of the geometric Brownian motion	247
13.1.1.2 Confidence interval for a geometric Brownian motion	248
13.1.2 Variable coefficient geometric Brownian motion	248
13.2 Ornstein–Uhlenbeck processes	249
13.2.1 Confidence intervals for a Ornstein–Uhlenbeck process	250

PART III: FINANCE

14 Actuarial calculus	255
14.1 Capitalisation regimes	255
14.2 Discount regime	258
14.3 Discounting and capitalisation	262
15 Equity derivatives models	263
15.1 Introduction	263
15.2 Pricing models for European options	263
15.2.1 Pricing in a uniperiodical context	263
15.2.1.1 The method of portfolio replication	264
15.2.1.2 The martingale method	266
15.2.2 Pricing in a multiperiodical context: the binomial model (Cox–Ross–Rubinstein)	268
15.2.2.1 Portfolio replication	269
15.2.2.2 The martingale probability measure	274
15.2.2.3 Implementation of the Cox–Ross–Rubinstein model	275
15.2.3 The Black–Scholes–Merton model	280
15.2.3.1 The asymptotic solution of the CRR model	280
15.2.3.2 The portfolio replication method and the martingale probability measure	288
15.2.3.2.1 The stochastic process of S	289
15.2.3.2.2 The stochastic process of B (or saving account process)	292
15.2.3.2.3 The stochastic process of V (or the replication portfolio process)	292
15.2.3.2.4 Discounted processes	293
15.2.3.2.5 The martingale measure p^*	294
15.2.3.2.6 The pricing of a European call option	297
15.2.3.3 The PDE method	302
15.2.3.3.1 PDE derivation for replication portfolio	302
15.2.3.3.2 PDE specification for the pricing of a call option: derivation of the Cauchy problem	304
15.2.3.3.3 The solution of the Cauchy problem via Feynman–Kac and the call price	304
15.2.3.3.4 Solution to the Cauchy problem via Fourier Transform	308
15.2.3.3.4.1 Transformation of the Cauchy problem into the corresponding logarithm version	308
15.2.3.3.4.2 The shift into the à-la BSM pricing context	309
15.2.3.3.4.3 The shift in Fourier space	311
15.2.3.3.4.4 The temporal shift of the transformed Cauchy problem	313
15.2.3.3.4.5 Specification of Cauchy problem as an ODE system	313

15.2.3.3.4.6	The solution of the Cauchy problem	314
15.2.3.3.4.7	Solutions computable by using quadrature algorithms	315
15.2.3.3.4.8	The call price	315
15.2.3.3.4.9	Implementation of the BSM model via Fourier transform for call pricing	315
15.2.3.3.5	BSM model under the risk-neutral probability measure	316
15.2.3.3.6	Relationship between P_k and $N(d_k)$	316
15.2.3.4	The Greeks	320
15.2.4	The Merton model (stochastic interest rate)	323
15.2.4.1	Introduction	323
15.2.4.2	Forward prices and probability measures	325
15.2.4.2.1	A derivative forward price	325
15.2.4.2.2	Derivative pricing under the <i>forward</i> probability measure	325
15.2.4.2.2.1	The discounted process for $P(t, T, r_t)$	325
15.2.4.2.2.2	The forward probability measure P^T	326
15.2.4.2.3	Derivative pricing: the relation between the forward price and the forward probability measure	327
15.2.4.2.3.1	Call pricing specification	328
15.2.4.2.4	The forward process of S	329
15.2.4.2.4.1	Call pricing specification with respect to the <i>forward</i> process of S	333
15.2.4.3	The call price	334
15.2.4.4	The Greeks	339
15.2.5	The Merton model (jump)	344
15.2.5.1	Introduction	344
15.2.5.2	PDE derivation for portfolio replication	345
15.2.5.3	PDE specification for a Call option pricing: derivation of the Cauchy problem	347
15.2.5.3.1	Transformation of the Cauchy problem into the corresponding logarithm version	348
15.2.5.3.2	The shift into the à-la BSM pricing context	349
15.2.5.3.3	The shift in Fourier space	352
15.2.5.3.3.1	The temporal shift of the transformed Cauchy problem	354
15.2.5.4	Specification of the Cauchy problem as an ODE system	355
15.2.5.5	The solution of the Cauchy problem	357
15.2.5.5.1	Solutions computable by using quadrature algorithms	358
15.2.5.6	The call price	358
15.2.5.7	Pricing a call with the Merton model: implementation	359
15.2.5.8	The Greeks	359
15.2.6	The Heston model	367
15.2.6.1	Introduction	367

15.2.6.2	PDE derivation for portfolio replication	368
15.2.6.3	PDE specification for the pricing of a call option: derivation of the Cauchy problem	371
15.2.6.3.1	Transformation of the Cauchy problem into the corresponding forward version	371
15.2.6.3.2	The shift into the à-la BSM pricing context	373
15.2.6.3.3	The shift in Fourier space	376
15.2.6.4	Specification of Cauchy problem as an ODE system	378
15.2.6.5	The solution of the Cauchy problem	379
15.2.6.5.1	The equation in D	379
15.2.6.5.2	The equation in C	382
15.2.6.5.3	Solutions computable by using quadrature algorithms	382
15.2.6.6	The call price	383
15.2.6.7	The Heston model under the Risk-neutral probability measure	383
15.2.6.8	Pricing a call with the Heston model: implementation	385
15.2.6.9	The Greeks	386
15.2.7	The Bates model	390
15.2.7.1	Introduction	390
15.2.7.2	PDE derivation for portfolio replication	391
15.2.7.3	PDE specification for the pricing of a call option: derivation of the Cauchy problem	395
15.2.7.3.1	Transformation of the Cauchy problem into the corresponding logarithmic version	396
15.2.7.3.2	The shift into the à-la BSM pricing context	397
15.2.7.3.3	The shift in Fourier space	400
15.2.7.3.3.1	The temporal shift of the transformed Cauchy problem	404
15.2.7.4	Specification of Cauchy problem as an ODE system	405
15.2.7.5	The solution of the Cauchy problem	409
15.2.7.5.1	The first system of differential equations	409
15.2.7.5.1.1	The equation in D_1	409
15.2.7.5.1.2	The equation in C_1	411
15.2.7.5.2	The second system of differential equations	411
15.2.7.5.2.1	The equation in D_2	411
15.2.7.5.2.2	The equation in C_2	414
15.2.7.5.3	Solutions computable by using quadrature algorithms	414
15.2.7.6	The call price	415
15.2.7.7	Pricing a call with the Bates model: implementation	415
15.2.7.8	The Greeks	415
16	Term-structure models	421
16.1	Introduction	421
16.2	Short-rate diffusive processes	426
16.2.1	Price of a risk-free zero-coupon bond	426
16.2.1.1	The process $P(t, T, r_t)$ in arbitrage-free conditions	427

16.2.1.1.1	PDE derivation	428
16.2.1.1.2	$P(t, T, r_t)$ SDE derivation	432
16.2.1.1.3	The price $P(t, T, r_t)$ as conditional expected value under the empirical measure	432
16.2.1.2	The process $P(t, T, r_t)$ in arbitrage-free conditions and under the risk-neutral probability measure	435
16.2.1.2.1	Shift to the risk-neutral probability measure	435
16.2.1.2.1.1	$P(t, T, r_t)$ SDE derivation	436
16.2.1.2.1.2	r_t SDE derivation	436
16.2.1.2.1.3	The process $P^*(t, T, r_t)$	437
16.2.1.2.1.4	The price $P(t, T, r_t)$ as a conditional expected value under the risk-neutral measure	439
16.3	The affine term-structure models	441
16.3.1	Introduction	441
16.3.2	The PDE that describes the process $P(t, T, r_t)$ in affine models	442
16.3.2.1	Vasicek model	444
16.3.2.1.1	Introduction	444
16.3.2.1.2	Arbitrage-free condition	446
16.3.2.1.2.1	SDE specification	452
16.3.2.2	The price $P(t, T, r_t)$ in the Vasicek model	452
16.3.2.3	Ho–Lee model	455
16.3.2.3.1	Introduction	455
16.3.2.3.2	Arbitrage-free condition	456
16.3.2.3.2.1	SDE specification	458
16.3.2.3.3	The price $P(t, T, r_t)$ in the Ho–Lee model	459
16.3.2.3.4	Ho–Lee model implementation	461
16.3.2.3.4.1	Construction of the constant volatility tree	462
16.3.2.4	Hull–White model	483
16.3.2.4.1	Introduction	483
16.3.2.4.2	Arbitrage-free condition	484
16.3.2.4.2.1	SDE specification	489
16.3.2.4.3	The price $P(t, T, r_t)$ in the Hull–White model	491
16.3.2.5	The Hull–White II model	498
16.3.2.5.1	Introduction	498
16.3.2.6	Arbitrage-free condition	499
16.3.2.6.1	SDE specification	503
16.3.2.7	The price $P(t, T, r_t)$ in the Hull–White II model	505
16.3.2.8	The Cox–Ingersoll–Ross model	506
16.3.2.8.1	Introduction	506
16.3.2.8.2	Arbitrage-free condition	507
16.3.2.8.2.1	SDE specification	516
16.3.2.8.3	The price $P(t, T, r_t)$ in the Cox–Ingersoll–Ross model	518
Index		519
